TOP FLIGHT

NEW

TOP FLIGHT

Top Flight, the intelligent table by José Martínez Medina.

A table with position light, electronic height elevation and reference light for audiovisual projections. It notifies you if the room is free and is capable of seating up to 14 people. The Top Flight smart table by JMM, designed by José Martínez-Medina, with almost 6 m2, is meant for teamwork.

A specialist in creating spaces where ideas and projects flow. JMM continues to improve the comfort of the place where we all spend so many hours working. Every day, a growing number of companies are discovering that comfort in the office affects not only productivity, but also improves it. Therefore they are becoming receptive to the idea of creating spaces for coexistence rather than for survival. Thus, sitting together at a table like Top Flight facilitates this exchange, which becomes an opportunity to enrich interpersonal communication and increase creativity.

NEW

TOP FLIGHT

Within this philosophy of contributing to the creation of pleasant and healthy spaces, the new Top Flight table incorporates Krion® in its top. A new generation of solid material developed by Porcelanosa Grupo which, in addition to being warm to the touch, non-porous, antibacterial and easy to clean, ecological, lightweight and highly resistant to temperatures and impacts, has the advantage of creating backlit environments. Thus, by combining different thicknesses of the material, impressive lighting effects can be achieved, creating astonishing spaces where colour, light and perception of volumes are the main features.

Composed of a light structure of four inclined legs made of high-density and lacquered MDF, the top has a pronounced bevel that leaves a thickness of 10 mm and lends it a lightness that reminds an aeroplane's wing. The top is finished in lacquer, wood or upholstered in Leather-Tech. It incorporates an electrification tray and openings in the lid, closed with a tray or pencil case in a lacquer finish. Additionally, there is the possibility of fitting a continuous top in FENIX material, either in white or black, and bases in a brushed stainless steel finish in black.
